

## 1. Prerequisites

The script uses **python 3**. We recommend that you install python from [Anaconda](#).

The following packages need to be installed before running (`pip install <package>`):

- `ujson`
- `beautifulsoup4==4.6.0`

## 2. Usage

Run: `python post_processing.py <path_to_cdr_file>`

will create a new CDR file at `<path_to_cdr_file>.processed`

For example:

```
python post_processing.py /home/users/sample_cdr.jl
```

will output a new file at: `/home/users/sample_cdr.jl.processed`
